BLOOD BANK HUB & HMS INTEGRATION

Group Contribution Plan & Git Branching Guide (120 Commits Target)

Group Members: Dagim, Bekam, Daniel, Ebisa, Desalegn, Desta

1. Contribution Strategy & Git Commitment Target

To meet the project target of around 120 total commits, the workload is divided equally into 20 commits per person. Each member must work on their specific git branch, commit incrementally, and push to origin. Do not commit all files at once. Perform small, logical updates to build a high commit history.

2. Developer Tasks, Branches, and Files

DAGIM (dagi931) — Project Lead & Backend Architect

Branch to Create:
`git checkout -b feat/admin-analytics`

Files to Push:
backend/src/controllers/adminController.js, backend/src/index.js, frontend/src/pages/dashboards/AdminDashboard.jsx

Commit Range:
20 Commits (e.g. init routes, socket config, stats aggregations, socket logs, UI integrations)

BEKAM (bekamdawit333) — Database & Security

Branch to Create:
`git checkout -b feat/database-security`

Files to Push:
backend/prisma/schema.prisma, backend/src/middleware/auth.js, backend/src/config/prisma.js

Commit Range:
20 Commits (e.g. define User models, create reset schemas, JWT validation hooks, audit log triggers)

DANIEL (Daniel1698-w) — HMS & Inventory

Branch to Create:
`git checkout -b feat/hms-inventory`

Files to Push:
backend/src/controllers/hmsController.js, backend/src/routes/hms.js, backend/prisma/seed.js

Commit Range:
20 Commits (e.g. init hms routing, check internal stock, handle shortfall, decrement quantities, seed data)

EBISA (Ebisa-Mitiku) — Password Recovery & UI

Branch to Create:
`git checkout -b feat/password-recovery`

Files to Push:
frontend/src/services/api.js, frontend/src/pages/auth/Login.jsx, frontend/src/App.jsx

Commit Range:
20 Commits (e.g. password recovery api wrapper, forgot link styling, reset overlay, input states)

DESALEGN (DesuTaresa) — Donor & Appointment Portal

Branch to Create:
`git checkout -b feat/donor-appointments`

Files to Push:
frontend/src/pages/dashboards/DonorDashboard.jsx, frontend/src/components/common/Announcements.jsx

Commit Range:
20 Commits (e.g. donor menu layouts, scheduling panels, calendars, history logs, dashboard assets)

DESTA (hailedesta60-glitch) — Station & Lab workflows

Branch to Create:
`git checkout -b feat/station-lab-workflows`

Files to Push:
frontend/src/pages/dashboards/StationDashboard.jsx, frontend/src/pages/dashboards/LabDashboard.jsx

Commit Range:
20 Commits (e.g. screening questions grids, lab result submissions, sample registration, markers logs)

3. Commit Frequency Guidelines

To hit the target commit count cleanly, each member should commit after writing every single logical sub-ste

1. Initial file stub creation (1 commit)
2. Importing dependencies and styles (1 commit)
3. Writing specific helper functions or JSX structures (3-5 commits)
4. Local testing and fixing syntax errors (3-5 commits)

5. CSS updates and visual enhancements (2-4 commits)
6. Final code cleanup and removing debug statements (1-2 commits)

Following this format prevents single monolithic pushes, creates a clear audit history, and easily builds a co
commits per person, hitting the group project goal of 120 commits total.
